Lamb Mascot — Designer Collectible Figurine

8 × 10 × 4 cm | Resin | ZBrush & Blender

The project explores the translation of graphic identity into physical form, bridging branding and collectible object design.

Designed with series scalability in mind, the character's simplified geometry and strong silhouette allow for future variations in colorways, finishes, or thematic reinterpretations.

This project was developed in collaboration with the Lamb team, a Paris-based thrift store known for hosting fashion pop-ups combining clothing, drinks, and DJ sets. this project reimagines the brand's 2D mascot as a premium collectible object.

With only a single front-facing reference available, the sculpt required a complete volumetric interpretation of the character. I focused on defining a strong, readable silhouette and balanced proportions while preserving the graphic simplicity that makes the logo distinctive. The challenge was to extrapolate unseen angles, designing the back and side views in a way that felt intentional rather than inferred.

The final sculpt was engineered for resin 3D printing at a scale of 8 × 10 × 4 cm. Special attention was given to structural integrity, balance, and clean surface transitions to ensure print reliability and high-quality finishing.

After printing, the figurine was hand painted to match the brand's visual language, resulting in a tangible extension of Lamb's identity designed for retail. Positioned between brand artifact and designer toy
